~ Starting Price Map \$3495 ~

•Exclusive Designed Controls- A variety of pickup control versatility, wired in stereo with Acoustic & Electric signals splittable to separate amps and/or mixer channels with independent mono & stereo outputs.

*1 Master Volume & 1 Master Tone both Push/Pull Coil Tapping.

(The Push/Pull Pot engages Coil Tapping... Both humbucker pickups can be split by the push/pull switch on the volume & tone control knobs to achieve a single-coil tone. This coil-tapping function allows you to instantly achieve brighter, snappier tones from the humbucker pickup, to replicate the sounds of other guitars equipped with single-coil pickups, and then return to the standard humbucker full, thick, warm, powerful tone at the push of a knob. The Single coil configurations are specially designed to be "hum-reducing".)

*Blend Control (w/Center Detent- Blends the 2 PAF. Humbucker Pickups)

*Independent Master Volume for Internal Acoustic Pickups

*Steel Speed Knobs w/Abalone Inlay

*One 1/4" TRS Mono/Stereo Output Jack

*One 1/4" TS Mono Output Jack
